

Katherine Peretick

Director of Engineering

Katherine Peretick has a diverse set of technical experience. Previously at General Compression, a high-tech compressed air energy storage startup company, Katherine led project engineering for the company's first commercial project. She also found and evaluated new project opportunities and developed models to prove functionality, reliability, and profitability of the unbuilt machine. In prior roles Katherine was part of the leadership development program at Vestas, and a reliability engineer for the Mars rover, Curiosity, during her time at NASA's Jet Propulsion Laboratory.
